There are hundreds of thousands of iPhones, iPod Touch, and iPad apps just about everything -- so how does someone you need, someone you know just needs to be there, is it very hard to find? Enter TlPB's new weekly feature where employees and readers alike sort through the App Store and help you find just the right app for it. This @lofte (yes, this is me!), asks: What is the plan I see people using with Instagram to make a collage/storyboard over a photo? To see what I was offered, follow along after the break! Diptic [\$0.99 -App Store link] is an iPhone and iPad app to create simple collages of your photos. The templates are designed in the form of a square, so Diptic is usually used along with Instagram [Free Store Link - App]. In fact, Deptic has Instagram as an export option, and sharing on the social networking app makes the photo a breeze. Diptic comes with 21 standard layouts and is equipped with frame sliders that allows you to customize the dimensions of the interior frames. You can also adjust the colors of the boundaries and give them rounded corners. In addition to Instagram, you can send your collages to Camera+, FiltersStourm, Dropmax, Ornot, Goodrader, Facebook, Flickr, Twitter, Posters, or Tumblr. Any other plans for those offers for me? Let me - and all of us - know in the comments. Having trouble finding out what you need in the app store? Remember the first mobile cameras? And the grainy, blurry, low-quality photos they produced? Well, these days phone photography is capable of some pretty impressive feats. Plus, unlike that bulky DSLR that transports you for the holidays, it's always on hand. Learning how to take incredible photos using only your phone is the best way to stand out and build a strong presence on Instagram. In this you'll learn how to take good Instagram photos using only your phone, and some Instagram image ideas to inspire your feed. How to take good Instagram photos on your phone learning how to take good photos on your phone requires understanding some basic principles of composition and brightness, and Huning has his instincts as a photographer. you just have to follow a few simple rules . Step 1: Use natural light is the foundation of a good photo. Understanding how to use light is the first and most important rule of taking large photos using only your phone. Avoid using your arrows in favor of natural light, which creates photos that are richer and brighter. An arrow can flatten your photo and wash your subject. If you can't shoot outdoors, take pictures near windows or in bright rooms. Even at night, finding ambient light sources, such as street lamps and storing windows is preferable. Step 2: Don't too consider your pictures Can turn on Which is too dark with editing tools, but it's not something that can fix a photo that's been over-exposed to it. Avoid excessive exposure by adjusting the brightness on your screen: tap and slide your finger up or down to adjust exposure. Another way to avoid being placed in too much light is by tapping your finger on the brightest part of the frame (in the case above, it will be windows) to adjust the brightness before breaking your photo. Step 3: Shoot at the right time because there are photographers love the Golden Hour. This time of day when the sun is low on the horizon makes every photo more beautiful. This is nature's Instagram filter. If you're shooting the meridian, the clouds are your friend. Getting a good shot under direct sunlight is hard to get that can be rough on photos. Clouds e release light from the sun, creating a softer and more flattering effect. Step 4: Following the rule of the third combination refers to the makeup of a photo: shapes, textures, colors and other elements that make up your images. The third rule is one of the most well-known principles of composition, and refers to a simple way to balance your image. Divides an image into a 3x3 network, aligning subjects or objects in a photo along gridlines to balance. For example, you can center your photo; but you can also achieve a pleasing effect with balanced asymmetry, where the theme is off-center but balanced by another object. In this case, the flowers are arranged in the lower right area of the photo, balanced by the sun in the top-left corner. Professional tip: Turn on gridlines for your phone's camera in settings, and use them to practice aligning your photos. Step 5: Consider your perspective when you have a picture on your phone, you'll probably keep it up around the eye surface and snap, right? That's what other people do if you want to get interesting and unexpected photos to resist this natural tendency. Taking photos from a different point of excellence will provide fresh perspective, even when it comes to a familiar place or topic. Try shooting from up or down, crouching low to the ground, or scaling a wall (if you feel ambitious). Don't break your leg in pursuit of the perfect shot, but challenge yourself to see things from a new perspective. Step 6: Your theme frame leaving space around the focal point of your photo can add more visual interest than zooming in. Sometimes you get amazing details that make the photo even better, like the moon above in the sky of this photo. Unlike a camera with an adjustable lens, your phone's camera zooms by shrinking your field of view. In fact, you just before cultivating your image. It can limit your options for later editing, and you may miss interesting details, so avoid doing it. Instead, just tap your photo subject or focal point to focus the camera. If you want to give yourself more options, you can buy an external lens that fits your phone. Step 7: Draw the eye of the beholder in photography, leading lines: Lines that run through your image that draw the eye and add depth. These may be roads, buildings, or natural elements such as trees and waves. Keep an eye out for leading lines and use them to add movement or purpose to your photo. You can use leading lines to guide the viewer's look to your subject, as in this shot. Step 8: Add depth it's easy to focus only on the theme of your photo, whether that's a person or a handsome slice of pizza. But photos that include layers, with patterns or objects in the background as well as backgrounds, are naturally interesting because they offer more depth. Instead of being cultivated only firmly on the flowers, the photo includes the railing behind them, a tree beyond, and then sunset and horizon. Each layer of photos offers something to look at, drawing you in. Step 9: Don't forget that some creative photos on Instagram are so popular that they become clichés and inspire an entire Instagram account dedicated to repeating images. Don't get so caught up in Instagram photo trends that they lose their creativity. You want to stand out from other brands on Instagram, so always challenge yourself to find a fresh angle on a common thread. This will also help you create a distinctive and memorable brand identity. Watch this video for even more tips on how to take good Instagram photos on your phone: 10 Instagram image ideas Now that you understand the basics of photography, let's talk about topics. There are certain themes and themes that perform well on Instagram as they offer extensive charm and a tone of visual interest. Note, because posting attractive content increases your visibility on Instagram. Here are a few Instagram photographic ideas: 1. Symmetry is pleasing to the eye, whether it appears in nature (Chris Hemsworth's face) or the man-made world (Hawaii Royal Hotel). Symmetric composition often increases an issue that might otherwise be exciting. You can also break your symmetry to add interest. In this photo, the bridge creates a vertical symmetric as trees and sunlight break it. 2. Our brain patterns also love patterns. Some Instagram accounts even collect a great following by documenting beautiful patterns, like I did this thing with the floor. Our global love of patterns also explains the viral appeal of Japanese artist Yayoi Kusama's mirror room, which creates infinitely repeat patterns of simple shapes and colors: look around for inspiration. Architecture, design and nature are all sources of mesmerizing patterns. 3. Vibrant colors are minimalism and neutral trendy, but sometimes you just crave a pop of color. Bright and rich colors make us happy and energetic. And when it comes to Instagram photography, it makes a huge impact on a small screen. They can even make a simple high-rise building look beautiful. 4. Humor if you want to be depressed about the state of the world, take to Twitter. Instagram is a happy place, it means humor plays well here, especially against fully written and edited photos reproduced on the platform. Funny photos are a breath of fresh air for your audience and show that you don't take all these things too seriously. 5. Curtain action conquers your subject in hard motion, which is what makes it so impressive. One shot is compellingly exciting action and arrest. It even turns a typical theme into something lovely: you don't always need to strive for perfection. Sometimes a little blur of movement adds an artistic, dreamy touch: when taking action shots, several options to increase your chances of an amazing shot. You can use burst mode (by holding your camera button) to take 10 shots per second. 6. Photo details of sharp focus on unexpected or interesting details can catch attention, especially in a feed full of busy, dynamic photos. It's like a palate cleanser that offers a sense of calm and tranquility. Using Instagram editing tools like Vignette (dimming the edges of your photo) or tile shifts (which creates a soft web around your focal point) can enhance detail photos. Take your photo from close distance to maintain quality. Shooting from a distance and cultivating reduced image resolution, leading to grainy, lackluster photos that damage your brand. Make sure you're uploading images that are measured for Instagram. 7. Captivating background This is a simple technique, but it works: use an excellent background! This is the reason you always want to take selfies in a restaurant bathroom with killer wallpaper. People show good photo walls for a reason. The more creative your background is, the better. As in this example, a gorgeous background can be the perfect supplement to a product. 8. Animals are some things right, even if we don't really understand why. Rant is contagious. Light is both a particle and a wave. Instagram photos are better if there is a cute animal in them. It would be fair to say that this is the cheapest trick in the book. But if you have an adorable puppy in your disposable (or, just put this into the world, miniature horses) it would be a mistake to use them. 9. Food did your mother ever tell you that your eyes are bigger than your stomach? Nowhere is it so much more true than Instagram, where we can't do enough food photography. The secret to a great food photo? Shoot from above, use photogenic surroundings, and use natural light. The last one is especially important, because the people who eat next to you definitely don't want to hang up with your flash. 10. People's research has found that people love looking at faces on Instagram (hello once again to Chris Hemsworth). In fact, photos that people have are up to 38% more like than photos without it. To capture a stunning portrait, follow the basics above: use natural light, choose an attractive background, and explore shooting from different angles to get more. Shot. Some phones even include a portrait mode that will optimize brightness and focus. Now that you know how to take amazing photos using your phone, learn how to edit them using our step-by-step guide.
